Heavy Duty Guard Locking with PROFIsafe and CIP Safety

amGard pro

A completely configurable safety interlocking solution allows specification of functionality to meet the exact requirements of your application. Pushbutton controls, ethernet connectivity and trapped key options can all be combined together into a single unit – providing a cost efficient solution compared to separate devices.

Fortress amGard*pro* products are designed, tested and TUV approved for use in Category 4/PLe safe control systems. The robust design and high strength rating of a Fortress interlock does not require additional safety components to be mounted to the gate to meet PLe. The integration of trapped keys within the unit can restrict access or protect employees during whole body access.
For connectivity, all devices can be specified with a quick disconnect receptacle and ordered with the correct mating cable in a variety of lengths. Or if ethernet architectures are preferred, safety over ethernet protocols can be integrated by using the *pro*Net module which supports PROFINET/PROFIsafe and EtherNet/IP CIP safety.

Frank is the integration of existing site RFID access cards as part of a software based access approval system for manufacturing areas. Data is collected in the Fortress system for data insights that can support efficiency analysis.

Frank is the integration of existing site RFID access cards as part of a software based access approval system for manufacturing areas. Data is collected in the Fortress system for data insights that can support efficiency analysis.

When mounting to machine guarding, mounting plates can be pre-fitted to the Fortress units to reduce fixings required in installation down to two 40mm wide variants are also available to fit narrow profiles.

Note: Our online product configurators are available on our website - **www.fortress-safety.com**

Suited to the demanding environments

Completely configurable

Robustness
10kN Retention Force

Networking Capability

EtherNet/IP

PROFINET

Environmental Resistance
Sealed to IP65 & IP67

DUST WATER

RFID Access Control
FRANK

Quick Disconnect options

## Application Requirement:

Access points can require safeguarding with safety switches to ensure the process cannot run with guards open. Wire-to-the-guard solutions are suited to fast and frequent access demands. Processes that do not stop instantly should be safeguarded with solenoid guard locking solutions that only unlock the guard when it is safe to access.
Guard Switch
Guard opens, safety switches open

Guard Lock
Guard is locked until machine stops, guard unlocking opens safety switches

Guard Switch

Opening the hatch immediately stops the machine by opening the safety contacts

Non solenoid switch body

Guard Lock

Access requested

Machine cannot run until guards are closed and locked again

Solenoid control switch body

Hatch cannot open until the machine comes to a controlled rest
Application Requirement:

Robot arms require safeguarding measures during operation and when carrying loads. The robot pallet stacker below has two access points and a single central panel. When mains power is isolated to the system, the Power-to-Lock solenoid is de-energised and access keys for access points are release. Mechanical only interlocks at the guard can be opened with an access key whilst also providing a personnel key the operator is forced to take inside the cell to prevent restart in accordance to ISO 14118.

Power-to-Lock Solenoid

Solenoid Unlocked

Safety Switch Open

Access keys unlocked, safety switch open.

Access Lock No. 1

Access key trapped, personnel key released, access door open.

Access Lock No. 2

Access key trapped, personnel key released, access door open.

Power isolated

Power-to-Lock solenoid

Access keys released after solenoid is de-energised

Access keys transported to doors

Operator is required to take safety key before gate can be opened

Returning safety key and closing the gate allows for access key removal

Solenoid cannot be energised without all access keys returned
Application Requirement:

Slitting lines require multiple safeguarding methods to cover different hazards. Safety controls for light curtains, guard locks and grab wires are integrated into two Ethernet connected Fortress units in the below application. Access is provided via RFID badges. The Fortress FRANK controller manages permissions and records data insights to restrict access based on training levels; Access frequency and duration can then be used for productivity analysis.

Request to enter made with RFID badge, access permission level checked

Access granted, solenoid unlocks, safety switches open, personnel key released, access door open

Access controller recording event information

FORTRESS ACCESS & CONTROL
Local Controller

PLC

External safety switch connected to Ethernet connected interlock

Access restricted to authorised RFID badge holders

Forced extracted key to prevent unexpected start-up

Ethernet connected control station with RFID badge reader for HMI access

Light curtains connected to Ethernet control station
Automated Storage & Retrieval Systems

Application Requirement:

Automated storage and retrieval systems have aisle entry access at aisle ends and / or mid aisle points. For EN 528:2008 compliance, automatic crane control is disabled by a key switch mounted in an enclosure outside the aisle. This key permits access to the aisle via the interlock. The same key enables manual crane control via a key switch on the cart inside the aisle. See EN 528:2008 for further guidance.

Solenoid-controlled gate interlock with key switch for request to enter

Key operated switch key trapped, automatic mode enabled

Key operated switch key removed, manual mode disabled

Crane automatic mode panel mounted switch

Crane manual mode panel mounted switch

Ethernet connected interlock with escape release and pushbutton control. The key switch is used for request to enter.

Guard Switch

2NC, 1NO heavy duty safety switch.
SA4S6ST401

Guard Lock with Forced Extracted Key

Personnel key is required to be taken by the operator before guard opens.

SD2S6EKL3ZL411MPB1

Guard Lock

Heavy duty Power-to-Unlock solenoid safety interlock.

SA2S6ZL411MPB1

Guard Lock with Single Action Escape Release

Ergonomic handle incorporates escape release in a single action. Operating red handle overrides locking mechanism and opens guard.

EI2A6SR411

Guard Lock with Escape Release

Heavy duty safety interlock with escape release. Activation overrides locking mechanism and creates stop command.

HS1S6R2ZR411

Guard Lock with Integrated Ethernet Communication

PROFINET / PROFIsafe connectivity to the interlock. Pushbuttons & emergency stop incorporated at the guard. EtherNet/IP CIP safety also supported.

EI2A6SRP11NDP6EIP7P2NPF10

What is *pro*Net?

Fortress' *pro*Net allows Fortress devices to become distributed I/O on PROFINET or EtherNet/IP networks. Safety information is exchanged using the PROFIsafe or CIP safety. The *pro*Net module can be configured for standalone control functionality, to power external devices via quick disconnects or as part of an amGard*pro* interlock unit.
Product Features:
- 3 dual channel safety inputs are supported. Can be utilised for guard locking, emergency stops and enabling switch connection all within one unit.
- Standard I/O for pushbutton / lamp functionality is extendable up to 40 I/O per configuration.
- An integrated network switch facilitates 'daisy-chain' bus topologies with no additional hardware.
- I6 I/O is available as protected external I/O via quick disconnects.
- F-address are set via web interface or DIP switches.
- Diagnostic functions available via web interface (supply voltage, current F-address, ethernet connection statistics).
- Variety of connection options including AIDA specification, M12 and 7/8" receptacles.

Control Stations

Fortress' *pro*Net control stations are configurable network solutions aimed at reducing the cost of installation / ownership of bespoke fabrications with hardwired control functionality.

Costs associated with wiring time, panel building, panel space and the purchasing of enclosures, IO modules, terminals, multi core cables, industrial connectors at the machine or cell for the safety switches, sensors and interlocks can be avoided. Units arrive ready to be plugged into the network via quick disconnects.

Control and safety communication are transmitted over a single ethernet cable plugged into the Fortress unit. 3 dual channel safety inputs are supported with 1 dual channel safety output.

Multi core cabling

Industrial connectors + armoured cable

Wiring time

Ethernet + 5 pin power cabling only

Reduced cabling complexity across flooring

Cable management

Panel Building

Pre-built controls

Up to 3 dual channels safety circuits per module from any device

Daisy chain-able power + Ethernet

# **F**ortress **R**FID **A**ccess **N**etwork **K**eys

Interlocks control when you can access equipment safely, Frank controls who can access equipment safely.

By integrating readers to suit the existing site RFID access cards into a Fortress device and providing a software based access approval control system; Frank can be integrated into automation systems with simple input / outputs to a PLC.
Data of who, when and where from access events is collated to a central point within facilities to allow for viewable events lists and data insights that can support efficiency analysis.

Fortress supports common card types including:

- 13.56MHz ISO 15693
- 13.56MHz with manufacturer's specific protocol
- 13.56MHz ISO 14443A
- 125kHz with manufacturer's specific protocol

Control Access

Frank system cross-references user credentials

User requests access using personal employee card

User approved, PLC processes inputs and door unlocks

Machine stops

Local controller reports activity to master controller

Manage Productivity

PLC processes inputs, door locked. Local controller reports activity to master controller

Machine restarts

Master controller logs all activity and manages permissions

User finishes task, closes the interlock and badges out using personal employee card

Viewable events list and insights

Misalignment Capability

Recognising that machine guarding installations often have a degree of variability and that guards move over time during use, Fortress provides market leading misalignment capability in the actuator offerings.

Actuator tongues can be moved vertically on a ratchet with angular misalignment also adsorbed by actuator design.

Max 3°

Max 3°

Maximum allowable angle between main interlock device and handle +/- 3° in vertical plane

+ 10mm
- 10mm

+/- 10mm vertical misalignment

Max 4°

Maximum allowable angle between assembly faces of main interlock device and handle +/- 4°

Mounting Plates

A series of packing and mounting plates to ensure most configured amGard*pro* safety gate switches can easily and simply be fitted to machine guarding. The configurable plates are a robust design of die cast aluminium and are suitable for both hinged and sliding guards. The packing and mounting plates are pre-fitted to the interlock when ordered together and the mounting plates. However, they can also be ordered separately.

Without Mounting Plates
With Mounting Plates
How to Configure:

The amGard*pro* online configurator allows you to add a mounting plate at the end of your configuration which will automatically select the correct mounting and packing plate that your configured unit requires.

FORTRESS INTERLOCKS

A Halma company

Step 1: Choose the Actuator, Handing & Head

Description	Information	Part No.
Linear insertion tongue	High strength and misalignment, suitable for all 'S' head configurations.	SA

Description	Information	Part No.
Tongue slidebar without a spring	Sliding motion holds door closed. With no return spring slidebar remains in the position it is left in.	SN

Description	Information	Part No.
Tongue slidebar with return spring	Sliding motion holds door closed. Return spring pulls the slidebar open when unlocked. Collision with interlock when closing guard avoided.	SS

Description	Information	Part No.
Short hinged handle	Short reach for use with 40mm wide units. (Removes need for separate handle on hinged guards).	HS1
| Description	Information	Part No.
Hand operated	Hand operated actuator with return spring.	SD

Description	Information	Part No.
Tongue slidebar with internal handle but no return spring	Sliding motion holds door closed. Same as a SN but escape release knob allows door to be **opened only** from the inside when main unit is unlocked.	SI

Description	Information	Part No.
Slimline tongue slidebar with internal handle c/w spacer behind the knob	Same as a SI but escape release knob allows door to be opened **and closed** from the inside when main unit is locked.	SF

Description	Information	Part No.
Long hinged handle	Long reach hinged handle for use with 80mm wide units.	HL1

Description	Part No.
Front facing	1

Description	Part No.
Left facing	2

Description	Part No.
Rear facing	3

Description	Part No.
Right facing	4

Description	Information	Part No.
Linear insertion slimline head	High strength and durability, suitable for all 'S' actuators and front / left / rear / right facings.	S6

| Insert your part number selection here	Actuator	Handing	Head	Push Escape Release Adaptor	Trapped Key Adaptors			Guard Switch / Guard Lock

Step 1: Choose the Actuator, Handing & Head

Description	Information	Part No.
Linear insertion tongue	High strength and misalignment, suitable for all 'T' head configurations.	TA

Description	Information	Part No.
Slidebar without a spring	Sliding motion holds door closed. With no return spring slidebar remains in the position it is left in.	TN

Description	Information	Part No.
Slidebar with a return spring	Sliding motion holds door closed. Return spring pulls the slidebar open when unlocked. Collision with interlock when closing guard avoided.	TS
Description	Information	Part No.
proHandle no internal release	Ergonomic handle for machine guarding, but no method to open door from inside.	EN

Description	Information	Part No.
proHandle, with internal access handle	Ergonomic handle for machine guarding. Internal access handle allows to be opened **and closed** from the inside.	EF

Description	Information	Part No.
Slidebar with internal handle but no return spring	Sliding motion holds door closed. Same as a TN but escape release knob allows door to be **opened only** from the inside when main unit is unlocked.	TI

Description	Information	Part No.
Slidebar with internal handle c/w spacer behind the knob	Same as a TN but escape release knob allows door to be opened **and closed** from the inside when main unit is locked.	TF

Description	Part No.
Left facing	2

Description	Part No.
Right facing	4

Description	Information	Part No.
Linear insertion head	High strength and durability, suitable for all 'T' actuators and left / right facings.	T6

| Insert your part number selection here	Actuator	Handing	Head	Push Escape Release Adaptor	Trapped Key Adaptors			Guard Switch / Guard Lock

Step 1: Choose the Actuator, Handing & Head

Description	Information	Part No.
Rotary insertion handle	Turning motion holds door closed. Ideal for non locking set ups.	MA

Description	Information	Part No.
Single action escape release handle	Red handle overrides all locking mechanisms and opens safety contacts to allow escape release.	EI

Description	Information	Part No.
Single action escape release handle	Red handle overrides all locking mechanisms and opens safety contacts to allow escape release. Red handle can also close door from inside.	EJ

Description	Information	Part No.
Rotary insertion head	Rotary insertion head suitable for MA actuator and left / right facings.	M6

Description	Information	Part No.
Single actions escape release head	Single action escape release head with automatic reset. Suitable for EI and EJ handle actuators and left / right facings.	A6
Single actions escape release head with key reset	Single action escape release head with key reset. Suitable for EI and EJ handle actuators and left / right facings.	I6

Description	Part No.
Left facing	2

Description	Part No.
Right facing	4

Insert your part number selection here	Actuator	Handing	Head	Push Escape Release Adaptor	Trapped Key Adaptors			Guard Switch / Guard Lock

Step 2: Do you want a Push Escape Release?

| Description |
| --- |
| A push escape release adaptor will allow guard to open even if unit is locked by keys and / or solenoid. A push escape release adaptor is not needed if a single action escape release head and handle combination have already been specified. |

Description	Information	Part No.
Pushbutton reset	Overrides all locking mechanisms and opens safety contacts to allow escape release. Simple push reset allows quick restart. Suitable for guards up to 60mm thick.	RX

Description	Information	Part No.
Pushbutton reset variable length	Same as RX but suitable. Suitable for guards up to 300mm thick.	RZ

Description	Information	Part No.
Security tool reset	Same as RX but key reset to ensure all incidents are reported those employees with a reset key.	R2

Description	Information	Part No.
Security tool reset variable length	Same as R2 but suitable. Suitable for guards up to 300mm thick.	R4

am

If a push escape release is not required leave part number blank and go to step 3.
Insert your part number selection here	Actuator	Handing	Head	Push Escape Release Adaptor	Trapped Key Adaptors			Guard Switch / Guard Lock

Step 3: Choose a Trapped Key Adaptor

Forced extracted key for personnel to carry inside area

am If you've selected an I6 / I7 / A6 / A7 or a push escape release adaptor then select a releasing lock.

Additional safety keys for multiple personnel - SK

Access key required to unlock guard - AK

Description	Part No.
Standard lock	L
Releasing lock (must be used if a push escape release or single action escape release head & handle selected).	R

Description	Part No.
Standard lock no dustcover	1
Standard lock with dustcover	2
Standard lock with padlockable dustcover	3
Masterable lock no dustcover	6
Masterable lock with dustcover	7

AK

Insert your part number selection here	Actuator	Handing	Head	Push Escape Release Adaptor	Trapped Key Adaptors			Guard Switch / Guard Lock

Step 4: Choose an Electrical Switching / Locking Body

Description	Information	Part No.
Slimline LOK body	Solenoid controlled safety switch. Holds door locked until signal sent to unlock. 40mm wide.	ZL
Slimline LOK body - releasing	Same as ZL but allows push escape release adaptor override locking means. Only 40mm wide.	ZR

| Description	Information	Part No.
LOK body	Solenoid controlled safety switch. Holds door locked until signal sent to unlock. 80mm wide.	SL
LOK body - releasing	Same as SL but allows push escape release adaptor or single action escape release head and handle to override locking means. Only 80mm wide.	SR

Description	Information	Part No.
STOP body	Non-locking safety switch.	ST

am If you have selected a push escape release adaptor or single action escape release head and handle then select a releasing lock.

Voltage Options	Part No.
24v	4
*pro*Net connection (80mm wide variants only)	P
110v (80mm wide variants only)	1
230v (80mm wide variants only)	2
ASi (80mm wide variants only)	8

am Slimline *pro*LOK can only be configured in 24v.

Solenoid Type & Override Options	Part No.
No locking (safety switch units only)	0
Power-to-Unlock auxiliary release	1
Power-to-Unlock emergency release	2
Power-to-Lock (24v, 110v & ASi only)	6

Safety Switching Principle Options	Part No.
Safety on guard locking for Power-to-Unlock solenoid locking units. Power-to-Lock solenoid locking units are always safety on guard.	1
Safety on guard power solenoid locking units.	6

am If no additional control functionality is required, skip to wiring step 9.
